## Cyclope Control

At Kalirel, we aim to provide the highest quality and efficiency, our commitment to improving our product and ultimately the end user benefits generated the idea for the Cyclope Wireless Programmer. With the Cyclope System, Kalirel are proud to offer the *ultimate* in control for your central heating system.

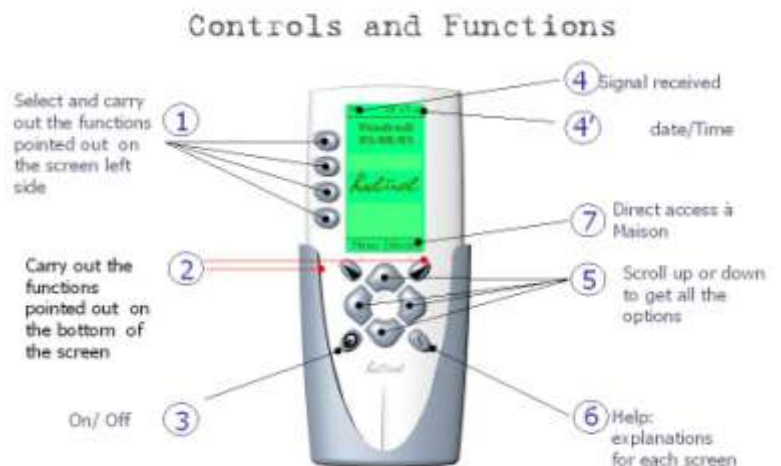

Each radiator is fitted with a Zigbee radio receiver that communicates with the wireless programmer. Thus allowing the user to control any radiator, anywhere in the home from the comfort of their armchair.

The Cyclope wireless controller allows for each radiator to be set up individually with a 24 hour, 7 day programmer. The user can also pre-set the comfort level temperature and background temperature of each radiator independently.

For example, the lounge radiator could be set at 21 degrees from 4pm to 6pm and at 17 ½ degrees from 6pm to 10pm, the hall radiator could be set at 18 degrees from 5pm to 7pm and at 14 ½ degrees from 7pm to 11pm, the bedroom radiator could be set at 14 ½ degrees from 4pm to 8pm and 18 degrees from 8pm to 10pm.

This level of control is unrivalled and is designed to allow the user to maximise their efficiency in their use of power consumption. Additionally, whilst saving money by using energy more efficiently, the user is also maintaining comfortable levels of heat throughout the home at all times of the day.

The Cyclope programmer is easy to use with Kalirel EasyPilot technology, that means operation is through a menu and option screens in a similar fashion to a mobile phone. Each screen also has the added benefit of a help option – by simply pressing the help button, a full operation description is displayed.

The Cyclope programmer features are fully detailed in the user guide which can be downloaded from our website – [www.kalirel.co.uk](http://www.kalirel.co.uk). Below, we have briefly listed a summary of these features :-

- ❖ Zigbee wireless technology
- ❖ 24 hour / 7 day programmer for each radiator
- ❖ Up to 4 zone capability
- ❖ EasyPilot – designed like a mobile phone, as easy to programme, control & pilot
- ❖ EnergyControl – allows the user to check on the power consumption in each room, each zone or the whole house
- ❖ Temperature – allows the user to change the temperature of any radiator anywhere in the home
- ❖ Over-ride – allows the user to turn any radiator on or off or to change from comfort level to background level or to frost protection mode.
- ❖ Locking – allows the user to lock any individual radiator
- ❖ OptiPower – allows the user to reduce the power consumption of the radiators to three levels
