

Architect Mr Peter Topps (Lacayo Wolfe Design Consultants London)

was assigned the task of sourcing an electric heating system for the British Study Centre Manchester Street in London, that would provide the lowest installation costs, minimum levels of maintenance, whilst at the same time sustain high quality standards.

MD Kevin Moore (A B Electrical Services Ltd) in conjunction with Richard Marsh EDMUNDSON Electrical Hertford (Telephone 01992 55 26 51) has been given the opportunity to install the kalirel systelia steel radiators with the KALIREL Cyclope radio-controlled wireless piloting system.

Mr Moore states that the system was very easy to commission, quick and easy to fix, using the hand held remote control offering an almost infinite range of options for controlling time, temperature & energy control.

The benefits of the radiators were also realised by the college occupants as they had a heating system that produced comfortable and even heat. We would recommend these as an alternative for a building where no adequate gas, oil supply was available, with no annual maintenance, repair. Why waste money installing an expensive boiler and pipework to centrally heat your home when the Kalirel System can heat each room to the desired temperature as and when required without pumping expensively heated water around your home.

A B Electrical Services Ltd a well established electrical contracting company based in Nottingham, registered with the N.I.C.E.I.C, an independent governing body, covering the whole of the UK and operates throughout the commercial, industrial and domestic industries, but specialise in shop fitting.

« May we take this opportunity in wishing Mr Salvatore Cirasuolo of KALIREL UK good luck in the future.

Kalirel Central heating without the pipes:

Imagine a stylish, cost-effective, centrally controlled radiator in every room – but with no pipes and no wires.

Then add the ability to program individually the time and temperature of each radiators, and you've got Kalirel heating, the French system that is taking the UK by storm.

Manufacturer Kalirel have launched their exciting range of electric radiators 'Central Heating without Pipes'. Each radiator works independently, providing the right amount of heat for the room in which it is installed. Central control is achieved using the patented Cyclope hand held programmer, which establishes a self-healing radio network throughout the installation. Users can control each individual radiator to maximise efficiency and reduce running costs.

If you are currently using panel or storage heaters, the loading for a similar number of Kalirel Radiators will be significantly lower & cheap to run. This is mainly due to their efficiency and also the totally different way they operate.

With the ZigBee Cyclope radio controlled range you can pilot your overall heating installation from your sofa. You are able to program individually the temperature and timing of the room from the Radio Control to within half a degree centigrade. Therefore, complying with the Energy efficiency requirements in the Building Regulations part L, equipped with an electronic thermostat that can work either as a stand alone or can be programmed with a pilot wire timer, both ranges of electric radiators are equipped with a lockable thermostat thanks to the Kalirel electromagnetic key, delivered with each radiator.

Three designs of radiator JAVA, AMBELIA and SYSTELIA are offered together with a range of towel rails to complete the system.

CENTRAL HEATING WITHOUT PIPES!

KALIREL the comfort and economy of the Ultimate Electric Central Heating system

A choice of three radiator designs with electronic thermostats to accurately control comfort and set-back temperatures in a wide range of applications! Comply with requirements in BUILDING Regulation Part L

- Maintenance free, no boilers, pipes, flues, pumps, no plumbers and costly annual verifications.
- No unsightly oil or LPG storage tank.
- Permanent 'hot point' effect to achieve high levels of efficiency and economy.
- Desired temperatures and timings for each radiator and zone of the installation.
- Fast and easy to install with five year guarantee!

Kalirel Cyclope® radio control system

Unique energy efficient technology for controllable whole house heating or as an addition to existing heating systems.

Kalirel Manufacturer
Thermodynamic fluid filled electric radiators, towel rails and piloting systems.
